MYCROFT INC. DELIVERS FULL SUITE OF CA TECHNOLOGIES SECURITY PRODUCTS AS A SERVICE

NEW YORK CITY (September 20, 2011) - Mycroft Inc., a global innovation leader in delivering IT identity and security solutions as a service, and CA Technologies, a pioneer in IT management and security software solutions, today announced the availability of CA Technologies full suite of identity and access management (IAM) products as a service to help enterprises quickly and cost effectively improve business efficiencies and help meet compliance demands associated with ensuring secure identity management and access to applications.

The Mycroft Managed Security Service for CA Technologies provides a quick-start identity and access management solution through the delivery of a full range of pre-configured CA IAM security products in a fully managed, private cloud environment. The offering is designed to deliver organizations as-needed scalability and guaranteed availability without the long and cost prohibitive implementation times that can sometimes plague traditional security configurations.

Built on the CA AppLogic(R) turn-key cloud computing platform that seamlessly composes, runs and scales distributed applications, Mycroft Inc.'s new service offering leverages its top tier security operations center to ensure each aspect of the environment - from the hardware up to each application - is monitored and maintained 24 hours a day, 365 days a year by a team of highly trained security experts.

"This new offering is just one example of CA Technologies and Mycroft Inc.'s strong partnership and long track record of making a successful impact on the way organizations manage identities and secure access to data and applications," said Lina Liberti, VP, Product Management, CA Technologies IAM Security business.

"This relationship also represents a key part of our business strategy for identity management," Liberti continued. "Our intent is to give customers a choice in how they use our IAM software to address their security and

compliance needs, whether it's as a service, on premise or a mix of the two. We will work with solution providers like Mycroft to deliver our software as a service, and at the same time, we will build on the success of our CA Arcot Advanced Authentication Cloud Service and introduce other identity management capabilities from the cloud."

"Delivering CA IAM security products as a service allows organizations of all sizes to quickly address mounting compliance and security concerns, using proven commercial technologies, while minimizing risk and increasing efficiencies in an economically sustainable way," said Elizabeth Butwin Mann, CMO of Mycroft Inc.

The offering features a subscription pricing model and utilizes CA AppLogic to deliver a highly consistent and scalable private cloud platform that eliminates capital expenses, reduces implementation complexity and promotes rapid deployment. Leveraging more than 20 years of IAM and compliance experience, Mycroft Inc.'s industry leading security best practices and implementation templates provide quick and reliable access to CA's security portfolio including CA Siteminder(R), CA Identity Manager, CA Role & Compliance Manager, and CA Federation Manager

About Mycroft Inc.

Mycroft Inc. is the innovation leader in delivering cloud-based IT identity and security solutions as a service.
