## **MYCROFT INC. ANNOUNCES GLOBAL AVAILABILITY OF iOS ENTERPRISE MOBILE SECURITY SOLUTION**

### ***IT Security Leader Launches Mobile Solution for Secure Access to Corporate Data Using One Device for Personal & Business Use***

**NEW YORK, NY (December 6, 2011)** - Mycroft Inc., a global innovation leader in delivering IT identity and security solutions as a service, announced today the global availability of the industry's first enterprise mobile security service that delivers secure access to corporate and government data using any smartphone or tablet device running Apple's iOS operating system.

The Mycroft MobileIA Security Service allows employees to use one device for both business and personal purposes through the creation of a separate, secure environment for accessing and hosting business data. To protect against lost or stolen device vulnerabilities, the service allows users to configure a device to automatically wipe data if it sits idle for a specified period of time. Additionally, the service ensures all messages and data remain safely within an organization's network until the destination device is ready to receive it.

The new offering also features a UK-specific solution that complies with British governmental security standards and controls, called IL3 or restricted networks.

"According to recent studies, 42 percent of employees currently use smartphones for business purposes, and that number is continuing to grow," said Terry Jost, Mycroft Inc. CEO. "Our customers responded to that shift by exploring ways to reconcile security needs with the benefits of an increasingly mobile workforce. Our mobile solution was developed in direct response to that need by allowing enterprises to harness the flexibility of mobile devices while also maintaining secure access to corporate information."

The Mycroft MobileIA Security Service provides a wide range of applications including a secure browser, encrypted email, calendar, contacts, document creation and editing, secure voice and camera, as well as the ability to develop custom mission applications inside the business environment. The service also leverages FIPS encryption for data at rest and in transit

Mycroft Inc.'s first-of-its-kind mobile security service builds on the company's expanding portfolio of cloud-based products and services. The portfolio includes managed security services, remote access solutions and a security-as-a-service offering that helps enterprises quickly and cost effectively improve business efficiencies and meet compliance demands associated with ensuring secure identity management and access to applications.

The Mycroft MobileIA Security Service for Android will be released in the first quarter of 2012.

**About Mycroft Inc.**

Mycroft Inc. is the innovation leader in delivering cloud-based IT identity and security solutions as a service. Focused on the configuration, delivery and management of its offerings, the company seamlessly integrates software and professional services expertise to provide enterprise implementations and portable fully managed private cloud-based offerings.
